RLS 1200/E-EV MX	1500/5500	÷	11500	kW

RLS/E-EV series burners are characterised by a modular monoblock structure that means all necessary components can be combined in a single unit thus making installation easier, faster and, above all, more flexible.

The series covers a firing range from 1250 to 11500 kW, and they have been designed for use in hot water boilers, overheated water boilers as well as steam boilers. Operation can be "two stage progressive" or alternatively "modulating" for both fuels, light oil and gas, with the installation of a PID logic regulator on the RLS 300÷800/E series burners while RLS/EV and RLS 1000-1200/E series is fully "modulating". The burner can, therefore, supply with precision the demanded power, guaranteeing an high efficiency system level and the stability setting, obtaining fuel consumption and operating costs reduction.

The innovative combustion head, adjustment system ensures perfect movement during modulation as well as reducing noise and pollutants.

Technical Data

MODEL	RLS 300	RLS 400	RLS 500

BASIC DESIGNATION

EXTENDED DESIGNATION

GAS TRAINS

The burners are fitted with a butterfly valve to regulate the fuel, controlled by the main management module of burner through a high precision servomotor.

Fuel can be supplied either from the right or left sides, on the basis of the application requirements.

A maximum gas pressure switch stops the burner in case of excess pressure in the fuel line.

The gas train can be selected to best fit system requirements depending on the fuel output and pressure in the supply line.

The gas trains are "Multibloc" and "Composed" type (assembly of the single components) with or without seal control.

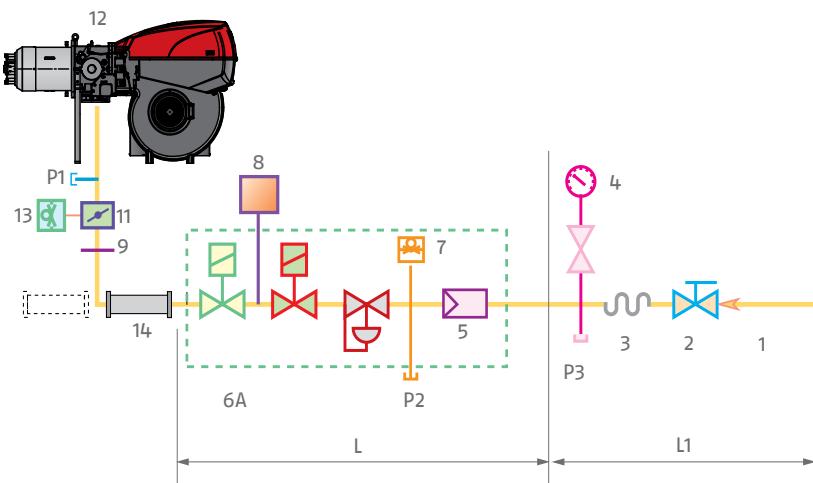

Example of gas adjustment butterfly valve for RLS 300-400-500-650-800 models.

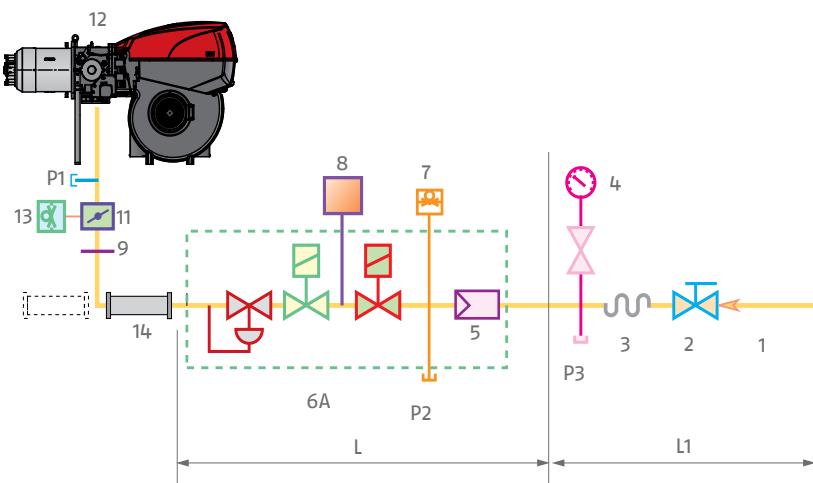

Example of gas adjustment butterfly valve for RLS 1000-1200 models.

CB "FLANGED OR THREADED"**DMV "FLANGED OR THREADED"**

Gas trains are approved by standard EN 676 together with the burner.

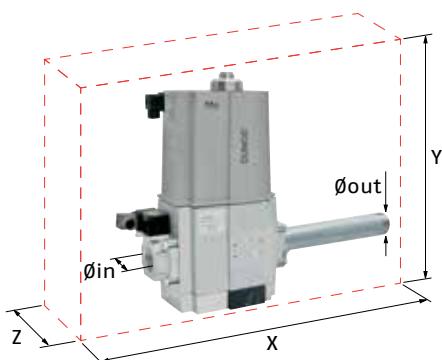

The overall dimensions of the gas train depends on how they are constructed. The following table shows the maximum dimensions of the gas trains that can be fitted to RLS/E-EV burners, intake and outlet diameters and seal control if fitted.

The maximum gas pressure of gas train "MULTIBLOC" type is 360 mbar, and that one of gas train "COMPOSED" type is 500 mbar.

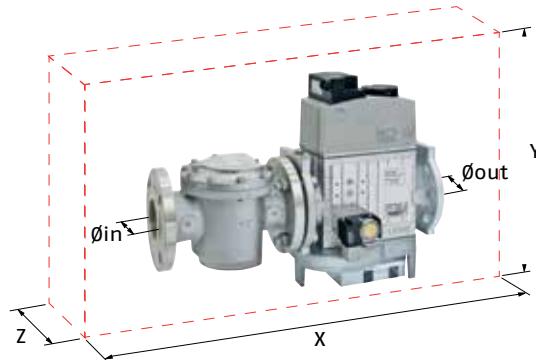

"MULTIBLOC" guarantees a range of pressure towards the burner from 4 to 60 mbar. For version DN 65 and DN 80 is from 20 to 40 mbar. For version DN 100 is from 40 to 80 mbar. The range of pressure in the "MULTIBLOC" with flange can be modified choosing the stabiliser spring (see gas train accessory).

The maximum gas pressure of gas train "CB" series is 500 mbar. "CB" gas train guarantees a range of pressure towards the burner from 10 to 30 mbar. The range of pressure can be modified choosing the stabilizer spring (see accessories).

The maximum gas pressure of gas train "DMV" series is 500 mbar. "DMV" gas train is supplied without pressure governor.

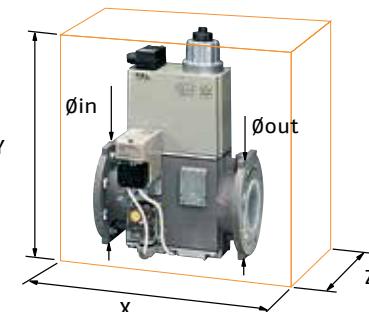

Example of gas train "MULTIBLOC" type
without seal control (i.e. MBC 1200)

Example of gas train "COMPOSED" type
without seal control (i.e. MBC 1900-3100-5000)

Pressure Drop Diagram

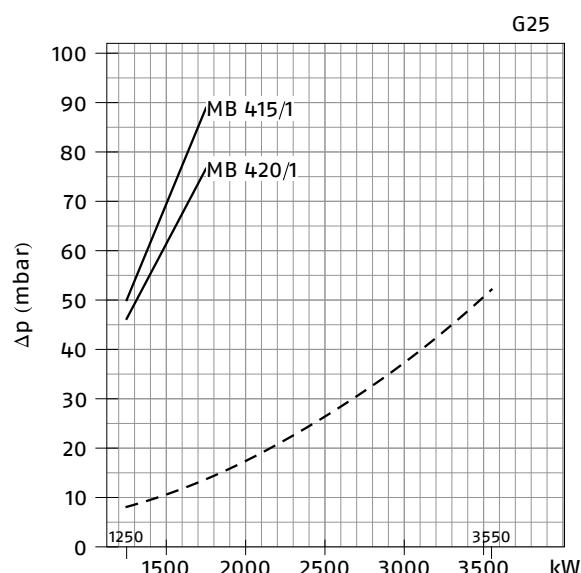

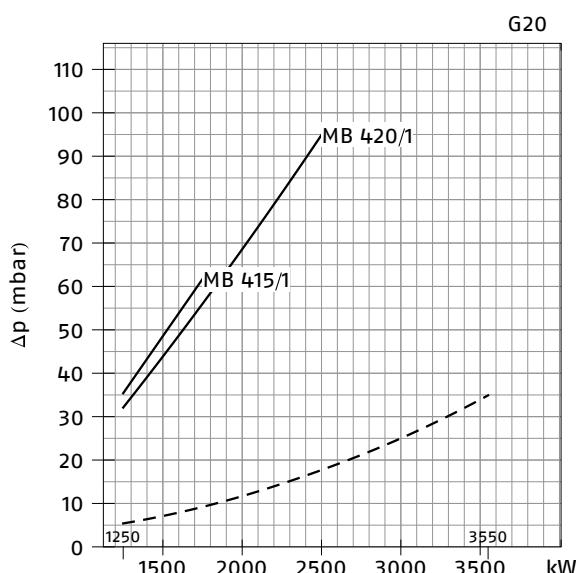

The diagrams indicate the minimum pressure drop of the burners with the various gas trains that can be matched with them; at the value of these pressure drop add the combustion chamber pressure.

The value thus calculated represents the minimum required input pressure to the gas train.

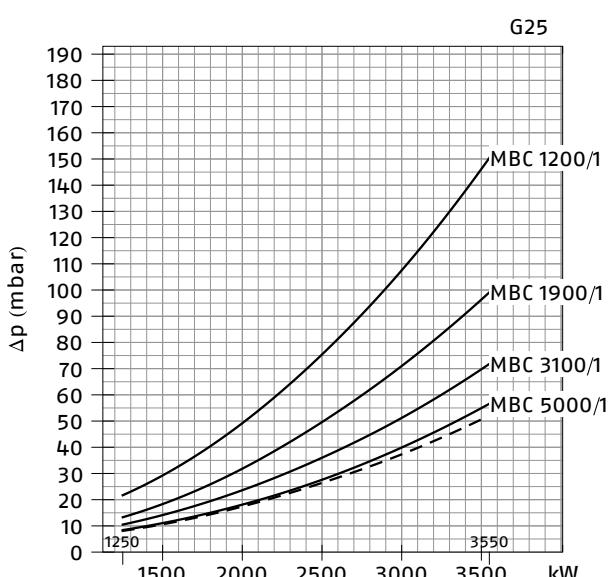

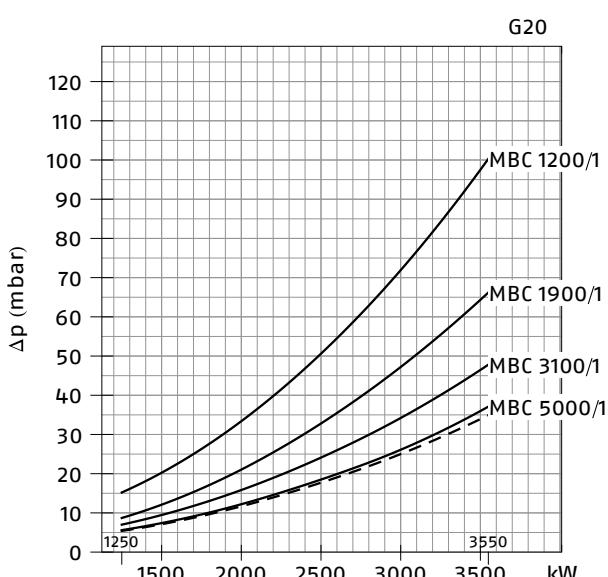

The minimum input gas pressure required is 15 mbar while burner operating.

In particular, the pressure difference between gas train upstream and downstream has to remain always over pressure drop values indicated below.

Hydraulic circuits

The hydraulic circuit of the RLS/E-EV series of burners is characterised by a fuel pump with an independent motor.

The burners are fitted with two valves (a safety valve and an operation valve) and an oil filter along the oil line from the pump to the nozzle.

A pressure regulator on the return circuit from the nozzle enables the quantity of fuel burnt to be varied. Two safety valves on the return circuit avoid oil leakage from the nozzle when the burner is in stand-by and prepurge phase.

The models are fitted with a maximum pressure switch on the oil return circuit, and a minimum oil pressure switch on the oil line from the pump to the nozzle.

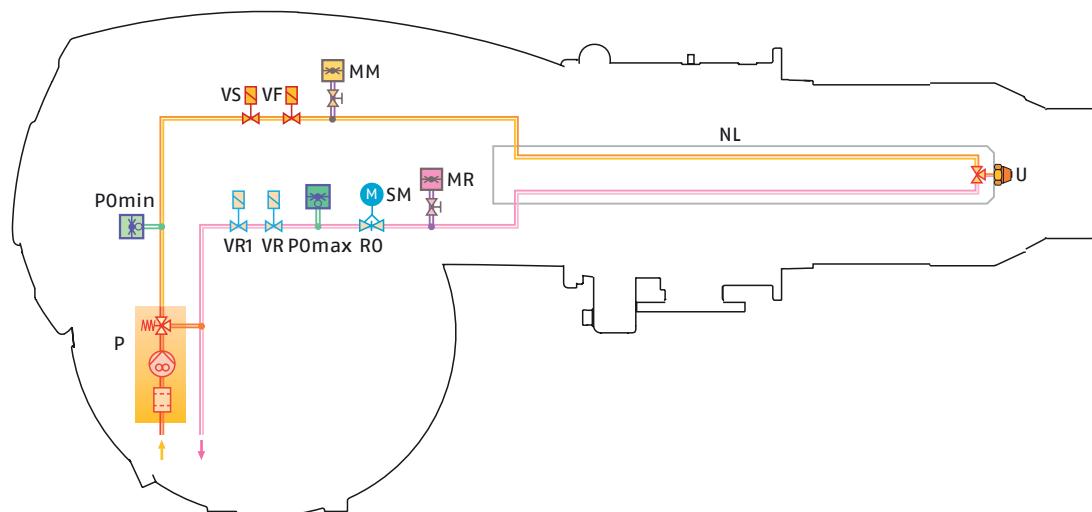

The burner is suitable for continuous operation.

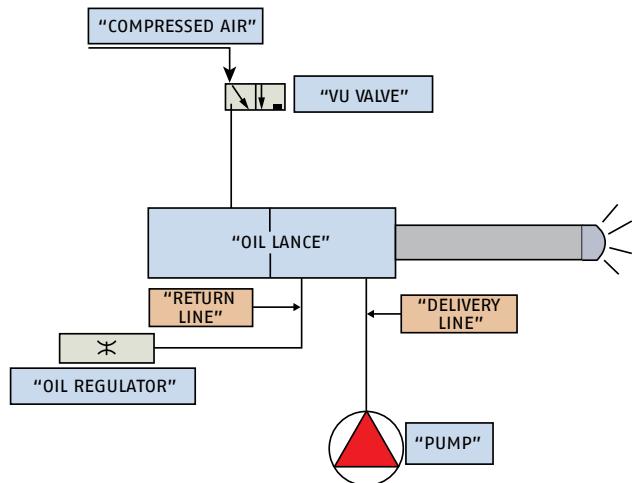

Example of the RLS 300-800/E-EV burner hydraulic circuit

P	Pump with filter and pressure regulator
P0 min	Min. oil pressure switch on the delivery circuit
VF	Operating valve

V	Vacuometer connection

Selecting the fuel supply lines

The fuel feed must be completed with the safety devices required by the local norms.

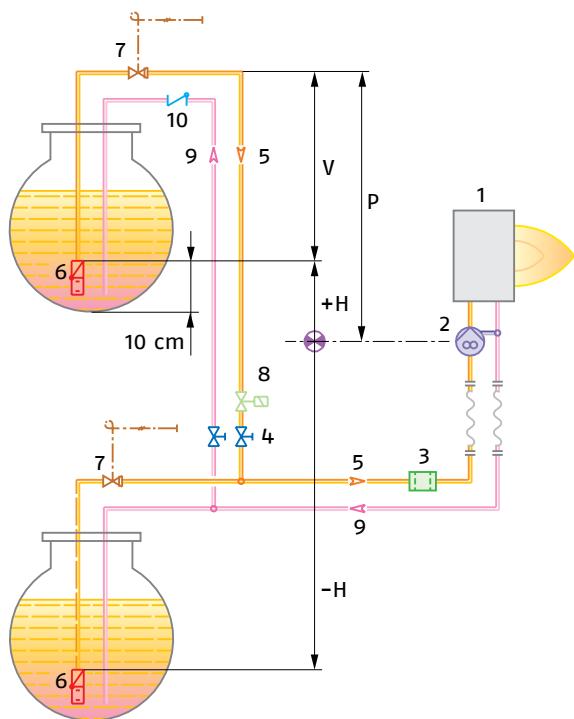

The table shows the choice of piping diameter, depending on the difference in height between the burner and the tank and their distance.

With ring distribution oil systems, the feasible drawings and dimensioning are the responsibility of specialised engineering studios, who must check compatibility with the requirements and features of each single installation.

Ventilation

The ventilation unit comes with a sound proofing system.

All the burners in the RLS 300-400-500-650-800-1000-1200/E-EV series are fitted with fans, which give excellent performance and are fitted in line with the combustion head. The air flow and sound-deadening materials used in the construction are designed to reduce sound emissions to the minimum and guarantee high levels of performance in terms of output and air pressure.

A high precision servomotor through the main management module installed on each burner of RLS 300-400-500-650-800-1000-1200/E-EV series, controls the air dampers position constantly.

Example of the RLS 1000-1200/E-EV sound proofing system.

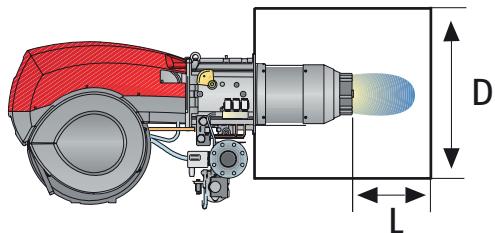

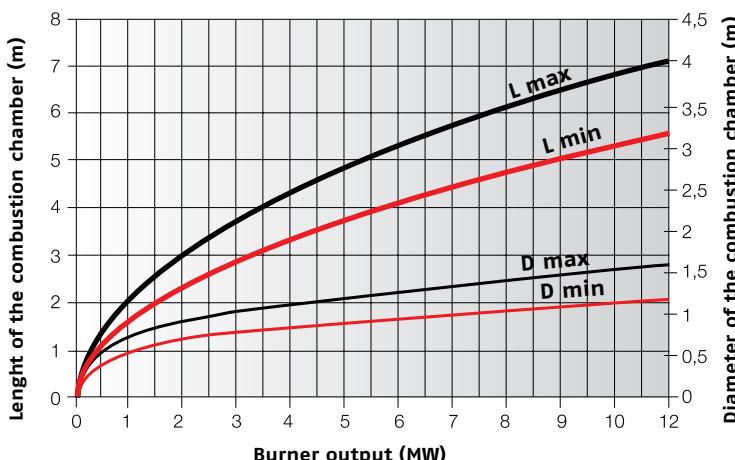

Combustion Head

The innovative combustion head adjustment system ensures perfect movement during modulation as well as reducing noise and pollutants. Simple adjustment of the combustion head allows to adapt internal geometry of the head to the output of the burner. The same adjustment servomotor for the air damper also varies, depending on the required output, the setting of the combustion head, through a simple lever. This system guarantees excellent mix on all firing rates range.

Example of a RLS 500/E-EV burner combustion head

DIMENSIONS OF THE COMBUSTION CHAMBER

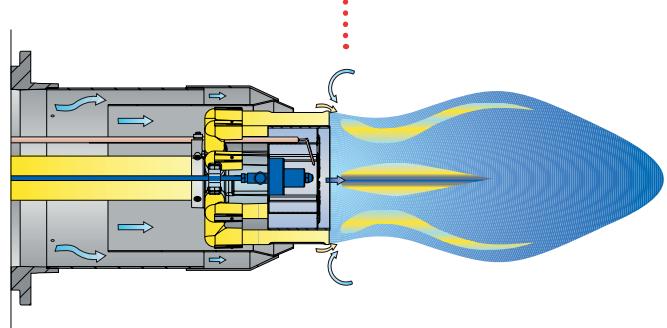

Example:
Burner thermal output = 3500 kW;
L combustion chamber (m) = 3,5 m (medium value);
D combustion chamber (m) = 1,5 m (medium value).

Safe and Green

The RLS/E-EV series combustion head reduce polluting emissions thanks to their special design which optimises the air fuel mix.

In the RLS/E-EV series part of the gas is distributed through outlets which the remaining gas is injected directly into the centre of the flame.

This prevents no homogeneous concentrations in the flame with areas of high oxidation, producing very stable flame with gradual and progressive combustion as the flame develops, thus giving polluting emission values below even the most restrictive norm values.

Combustion head operating diagram of RLS/E-EV series

Burner Operation Mode

Each RLS/E-EV series burner is equipped with an electronic microprocessor management panel, which controls the air damper servomotor as well the fuel servomotors.

Hysteresis is prevented by the precise control of the two servomotors and the software link by can - bus.

The high precision regulation is due to the absence of mechanical clearance normally found in mechanical regulation cams on traditional modulating burners. For the burner commissioning it is necessary to use the AZL unit display. It must be ordered separately for RLS 300÷800/E models, while for RLS 1000-1200/E and RLS 300÷1200/EV models it is included.

In the RLS 300÷800/E burners the standard working is two stage progressive and the PID regulator, to control the boiler temperature or pressure, is available as accessories.

In the RLS 1000-1200/E and RLS 300÷1200/EV burners the PID regulator to control the boiler temperature or pressure is included in the control box. The burner can work for

a long time on intermediate output settings (see picture A).

In the RLS/EV series variable speed drive control (VDS) and Oxygen control are obtained by installation of a special kit. The display operating unit (AZL) is already on board.

The display and operating unit (AZL) shows all operational parameters in real time, so as to keep a constant check on the burner:

- servomotor angle
- required set-point and actual set-point
- fuel consumption (RLS/EV)
- smoke and environmental temperature (RLS/EV)
- O₂ value (RLS/EV)
- error checking, self diagnostic fault analysis.

- As accessory

FAN SPEED CONTROL (ON DEMAND)

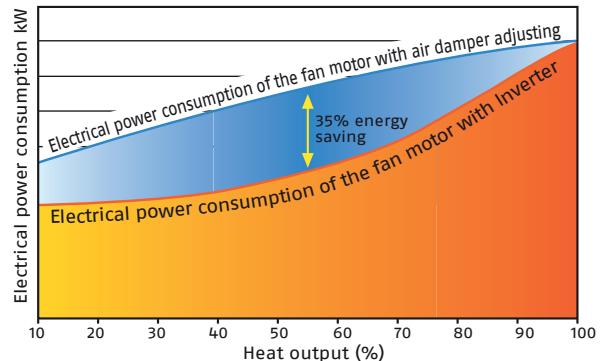

The inverter device fitted to the RLS/EV series burner acts on the electrical supply frequency of the fan motor to adjust the air flow through the motor speed variation.

The main advantages of speed control:

- lower sound emissions
- electric power saving.

The fan motor supplies just the necessary air flow, thus reducing sound emissions and avoiding energy loss due to the air damper regulation mechanism. The inverter technology can save up to 35% of the energy costs.

A safety device to verify the correct speed of the motor is mounted on the air suction circuit of the burner.

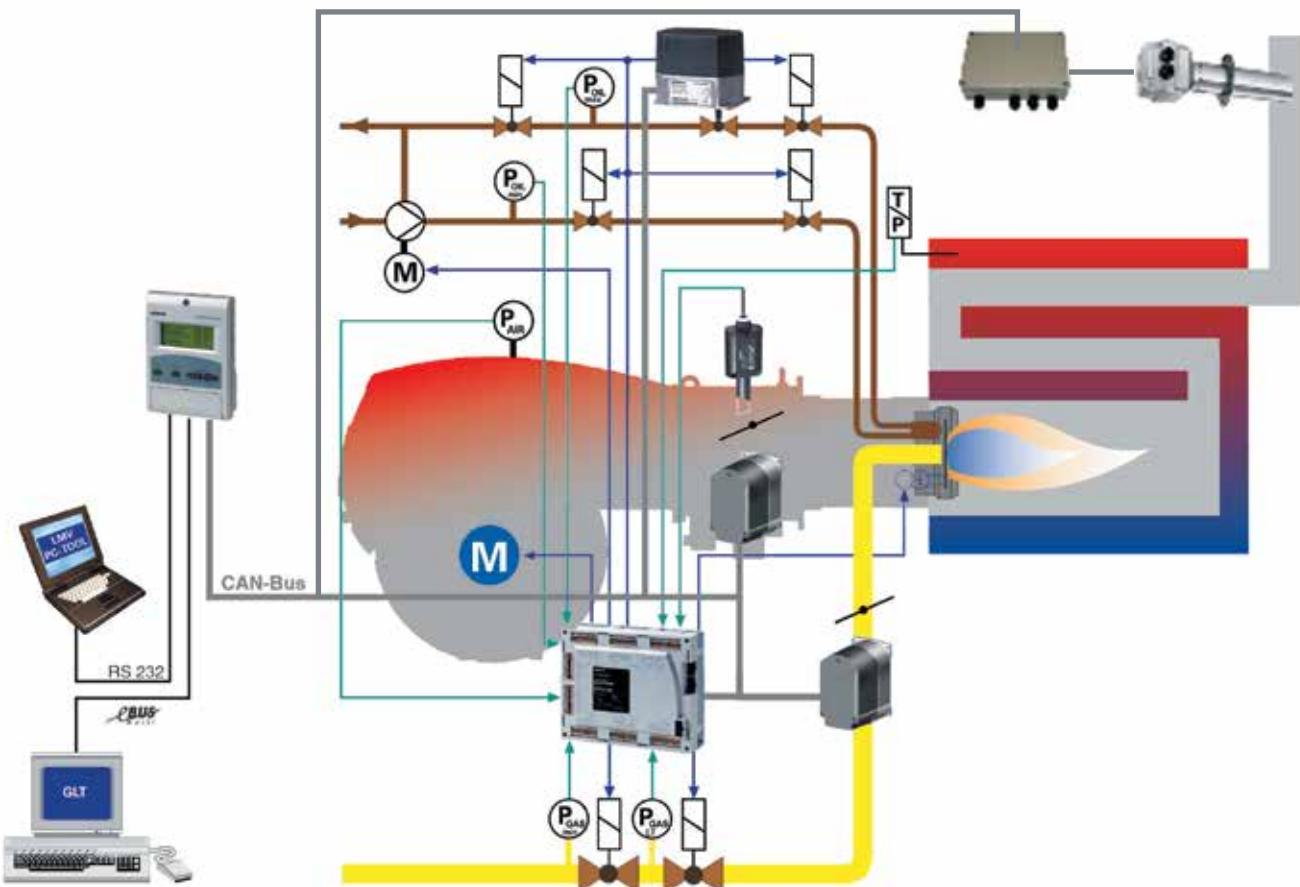

BURNER MANAGEMENT SYSTEM

The new electronic cam is a microprocessor based burner management system with matching system components for the control and supervision of forced draft burners.

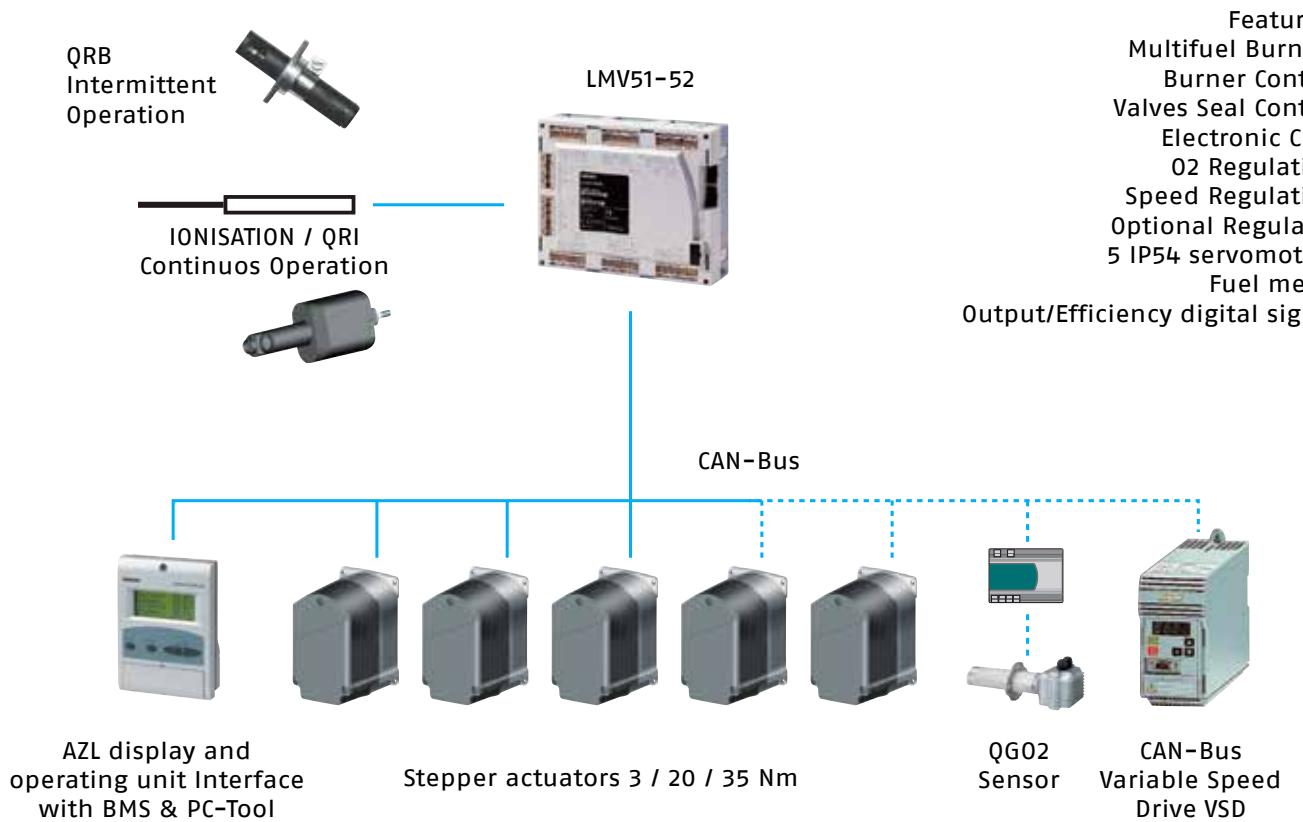

The system components are interconnected via a bus system.

Communication between the individual bus users takes place via a reliable system-based data bus. All safety-related digital outputs of the system are permanently monitored via a contact feedback network.

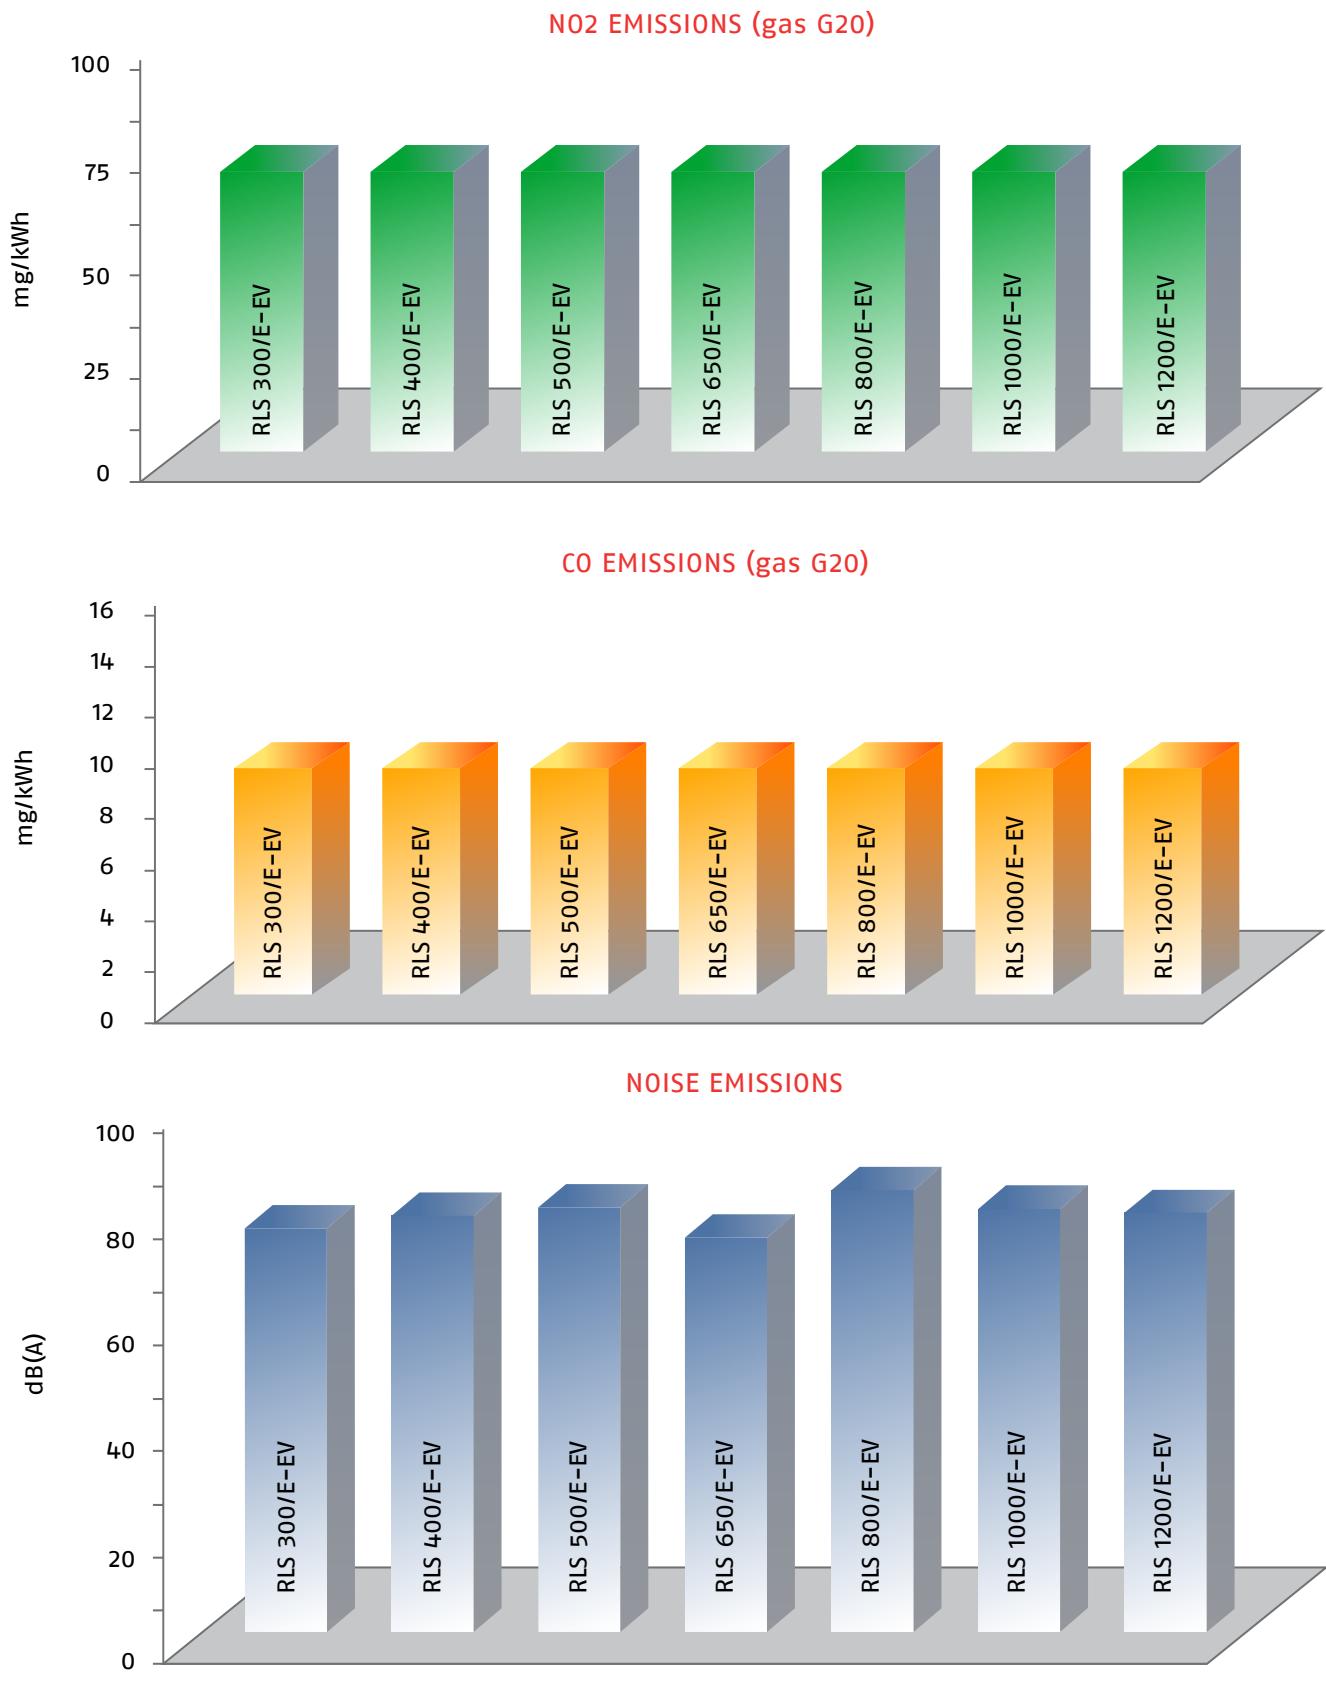

Example of burner management system in dual fuel burner configuration

ACCESSORIES FOR MODULATING OPERATION

To obtain modulating operation, the RLS 300÷800/E series of burners requires a regulator.
In RLS/EV and RLS 1000-1200/E models PID regulator is integrated inside the control box.

BURNER	REGULATOR TYPE	REGULATOR CODE
All models	RWF 50.2	20101190
All models	RWF 55.5	20101191

The relative temperature or pressure probes fitted to the regulator, must be chosen on the basis of the application.

BURNER	PROBE TYPE	RANGE (°C) (bar)	PROBE CODE
All models	Temperature PT 100	-100 ÷ 500°C	3010110

Specification

DESIGNATION OF SERIES

A specific index guides your choice of burner from the various models available in the RLS/E-EV series. Below is a clear and detailed specification description of the product.

Series: R							
Fuel: S Natural Gas L Light oil LS Light oil/Natural Gas N Heavy oil							
Size							
Setting : /1 Single stage /E Electronic cam /B Two stage /P Proportioning air/gas valve /E-EV Modulating - Mechanical cam /EV Electronic cam predisposed for variable speed (with inverter)							
Emission : C11 or ... Class 1 EN267 – EN676 C22 or MZ Class 2 EN267 – EN676 C33 or BLU Class 3 EN267 – EN676 C23 or MX Class 2 EN267 – Class 3 EN676 C13 Class 1 EN267 – Class 3 EN676							
Head length: TC standard head TL extended head							
Flame control system: FS1 Standard (1 stop every 24 h) FS2 Continuous working (1 stop every 72 h)							
Electrical supply to the system: 1/230/50 1/230V/50Hz 3/230/50 3/230V/50Hz 3/400/50 3N/400V/50Hz 3/230-400/50 3/230V/50Hz – 3N/400V/50Hz 3/220/60 3/220V/60Hz 3/380/60 3N/380V/60Hz 3/220-380/60 3/220/60Hz – 3N/380V/60Hz							
Auxiliary voltage: 230/50-60 230V/50-60Hz 110/50-60 110V/50-60Hz

Other versions are available on request.

PRODUCT SPECIFICATION

Burner

Monoblock forced draught gas burner with modulating operation, fully automatic, made up of:

- Fan with low sound emissions
- Air suction circuit lined with sound-proofing material
- Air damper for air setting controlled by a high precision servomotor
- Air pressure switch
- Fan starting motor at 2800 rpm, three-phase 230/400 - 400/690 V with neutral, 50Hz
- Separate light oil pump
- Low emission combustion head, that can be set on the basis of required output, fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - ignition electrodes for RLS 300-400-500/-ignition gas pilot with gas train for RLS 650-800-1000-1200
 - flame stability disk
- Maximum gas pressure switch, with pressure test point, for halting the burner in the case of over pressure on the fuel supply line
- Module for air/fuel setting and output modulation with separated PID control of temperature or pressure, available as accessory for RLS 300-400-500-650-800/E MX model
- Electronic cam for controlling the system safety
- Infrared flame detector
- Display unit AZL... for RLS 1000-1200/E and RLS/EV models
- Star/triangle starter for the fan motor (burners with motor electrical power $\geq 7,5$ kW - RLS/E versions)
- Main electrical supply terminal board
- Burner on/off switch
- Auxiliary voltage led signal
- Burner working led signal
- Contacts motor and thermal relay with release button
- Motor internal thermal protection
- Motor failure led signal
- Burner failure led signal and lighted release button
- Emergency button
- Connection plugs-sockets
- Burner opening hinge
- Lifting rings
- IP 54 electric protection level
- Gears pump for high pressure fuel supply
- Pump starting motor
- Oil safety valves
- Valve system with double oil safety valve on the output circuit and double safety valve on the return circuit
- Oil/Gas selector
- Flame inspection window.

Gas train:

Fuel supply line in the Multibloc configuration (for a diameter of 1-1/2" and 2") or Composed configuration (from a diameter of DN 65 to a diameter of DN 125) fitted with:

- Filter
- Stabilizer
- Minimum gas pressure switch
- Safety valve
- One stage working valve with ignition gas output regulator

Note: valve seal control already present inside burner control box.

Conforming to:

- 2004/108 EC directive (electromagnetic compatibility)
- 2006/95 EC directive (low voltage)
- 2006/42 EC directive (machine)
- 2009/142 EC directive (gas)
- EN 676 (gas burners)
- EN 267 (light oil burners).

Standard equipment:

- 1 flange gasket
- 4 screws for fixing the flange
- 1 thermal screen
- 4 screws for fixing the burner flange to the boiler
- 2 flexible pipes for connection to the oil supply network
- 2 nipples for connection to the pump with gaskets
- Seal control
- Seal control pressure switch (for installation on gas train)
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue.

Available accessories to be ordered separately:

- Nozzle
- RWF 40 for RLS 300-800/E MX
- Temperature probe -100 ÷ 500°C
- Pressure probe 0 ÷ 2.5 bar
- Pressure probe 0 ÷ 16 bar
- Pressure probe 0 ÷ 25 bar
- Variable speed drive (VSD) for /EV models
- Oxygen control kit
- PC interface software (ACS 450)
- Kit efficiency for /EV models
- LPG kit
- Display and operating unit (AZL)(included in /EV models and RLS 1000-1200/E)
- Sound proofing box
- Spacer
- Gas train adapters
- Spring.

Notes

Riello Burners a world of experience in every burner we sell.

10/2015

TS0070UK02

[1]

[2]

Across the world, Riello sets the standard in reliable and high efficiency burner technology.

With burner capacity from 5 kW to 48 MW, Riello gas, oil, dual fuel and Low Nox burners deliver unbeatable performance across the full range of residential and commercial heating applications, as well as in industrial processes.

With headquarter in Legnago, Italy, Riello has been manufacturing premium quality burners for over 90 year. The manufacturing plant is equipped with the most innovative systems of assembling lines and modern manufacturing cells for a quick and flexible response to the market.

Besides, the Riello Combustion Research Centre, located in Angiari, Italy, represents one of the most modern facility in Europe and one of the most advanced in the world for the development of the combustion technology.

Today, the company's presence on worldwide markets is distinguished by a well-constructed and efficient sales network, alongside many important Training Centres located in various countries to meet its customers' needs. Riello has 13 operational branches abroad (in Europe, America and Asia), with customers in over 60 countries.
