

RLS 500÷1200/M Series

Low NOx Progressive Two-Stage or Modulating Operation Burners

RLS 500/M MX	1120/2500	÷	5050	kW
RLS 650/M MX	1430/3000	÷	6550	kW
RLS 800/M MX	1750/3500	÷	8000	kW
RLS 1000/M MX	1200/3750	÷	10600	kW
RLS 1200/M MX	1500/5500	÷	11500	kW

RLS/M burners are characterised by a modular monoblock structure that means all necessary components can be combined in a single unit thus making installation easier, faster and, above all, more flexible.

The series covers a firing range from 2500 to 11500 kW, and it has been designed for use in hot water boilers, overheated water boilers as well as steam boilers.

Operation can be "two stage progressive" or alternatively "modulating", for both fuels, light oil and gas, with the installation of a PID logic regulator.

The mechanical cam device of regulation allows to catch up a high modulation ratio on all firing rates range. The burners can, therefore, supply with precision the demanded power, guaranteeing a high efficiency system level and the stability setting, obtaining fuel consumption and operating costs reduction.

The combustion head guarantees reduced polluting emissions ($\text{NO}_x < 80 \text{ mg/kWh}$ on gas operation). An exclusive design guarantees low sound emissions, low electrical consumption, easy use and maintenance.

Technical Data

MODEL		RLS 500/M	RLS 650/M	RLS 800/M				
Burner operation mode		Progressive two-stage or modulating						
Modulation ratio at max. output		4 ÷ 1

BASIC DESIGNATION											
EXTENDED DESIGNATION											

GAS TRAINS

The burners are fitted with a butterfly valve to regulate the fuel, controlled by the main management module of burner through a high precision servomotor.

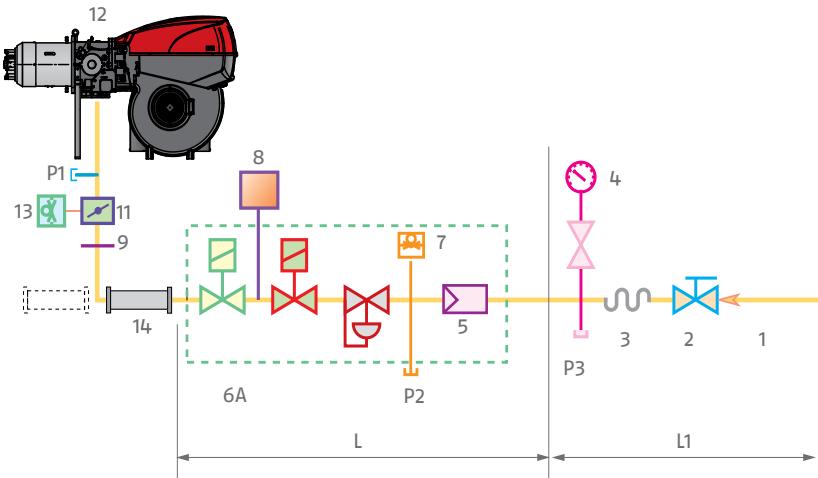

Fuel can be supplied either from the right or left sides, on the basis of the application requirements.

A maximum gas pressure switch stops the burner in case of excess pressure in the fuel line.

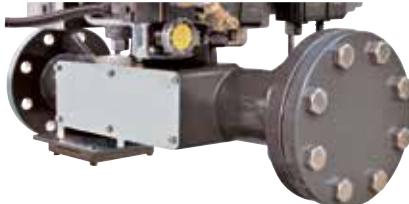

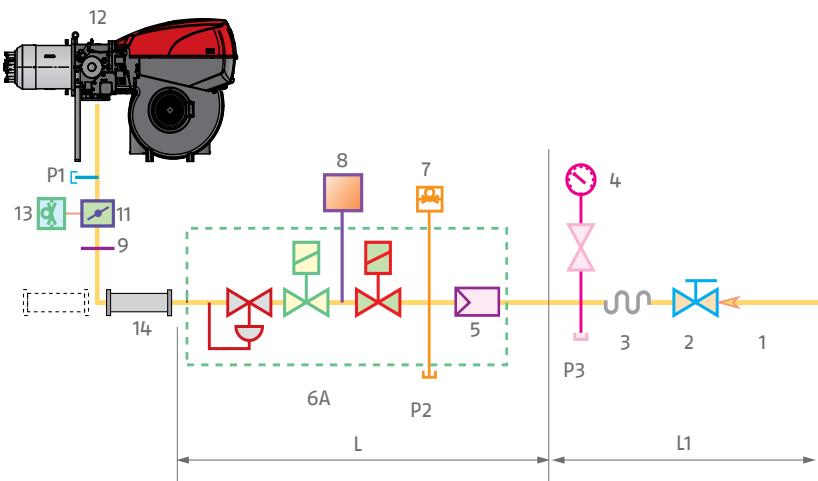

The gas train can be selected to best fit system requirements depending on the fuel output and pressure in the supply line.

The gas trains are "Multibloc" and "Composed" type (assembly of the single components) with or without seal control.

CB "FLANGED OR THREADED"

DMV "FLANGED OR THREADED"

Gas trains are approved by standard EN 676 together with the burner.

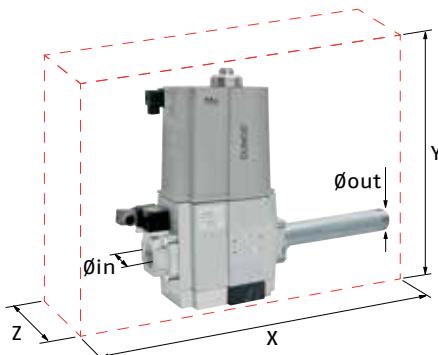

The overall dimensions of the gas train depends on how they are constructed. The following table shows the maximum dimensions of the gas trains that can be fitted to RLS 500-650-800-1000-1200/M burners, intake and outlet diameters and seal control if fitted.

The maximum gas pressure of gas train "MULTIBLOC" type is 360 mbar, and that one of gas train "COMPOSED" type is 500 mbar.

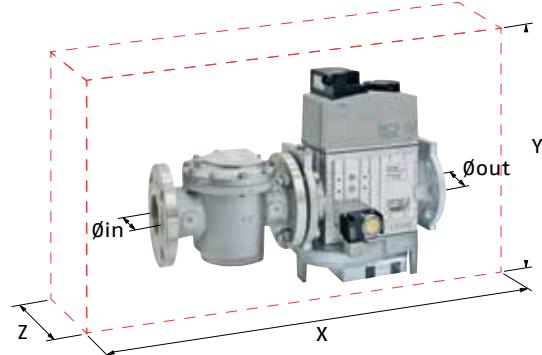

"MULTIBLOC" guarantees a range of pressure towards the burner from 4 to 60 mbar. For version DN 65 and DN 80 is from 20 to 40 mbar. For version DN 100 is from 40 to 80 mbar. The range of pressure in the "MULTIBLOC" with flange can be modified choosing the stabiliser spring (see gas train accessory).

The maximum gas pressure of gas train "CB" series is 500 mbar. "CB" gas train guarantees a range of pressure towards the burner from 10 to 30 mbar. The range of pressure can be modified choosing the stabilizer spring (see accessories).

The maximum gas pressure of gas train "DMV" series is 500 mbar. "DMV" gas train is supplied without pressure governor.

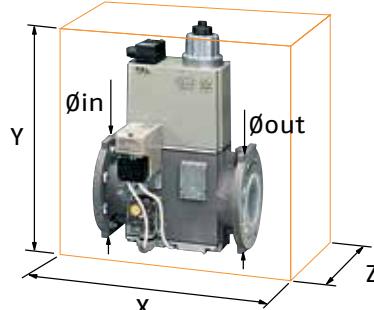

Example of gas train "MULTIBLOC" type
without seal control (i.e. MBC 1200)

Example of gas train "COMPOSED" type
without seal control (i.e. MBC 1900-3100-5000)

Example of gas train "CB" series
with seal control

Example of gas train "DMV" series
with seal control

Pressure Drop Diagram

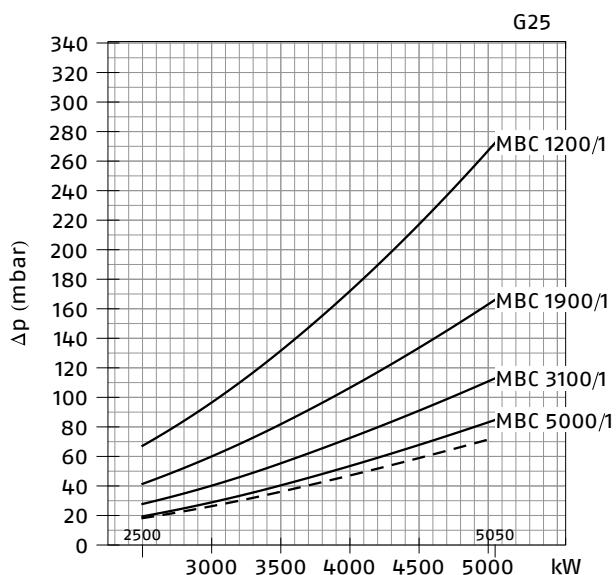

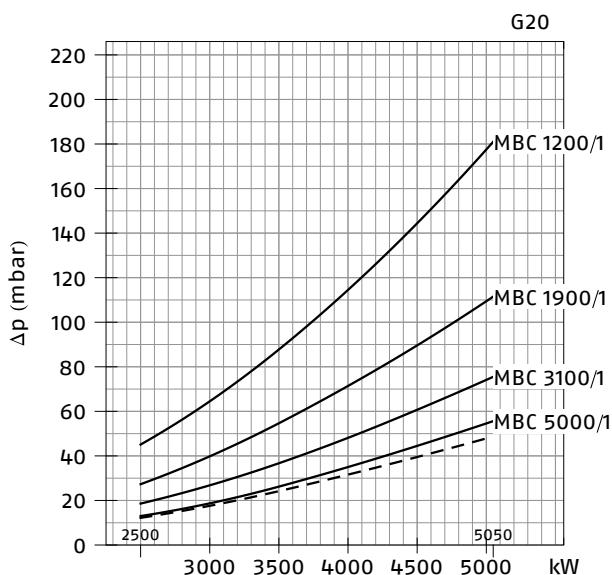

The diagrams indicate the minimum pressure drop of the burners with the various gas trains that can be matched with them; at the value of these pressure drop add the combustion chamber pressure.

The value thus calculated represents the minimum required input pressure to the gas train.

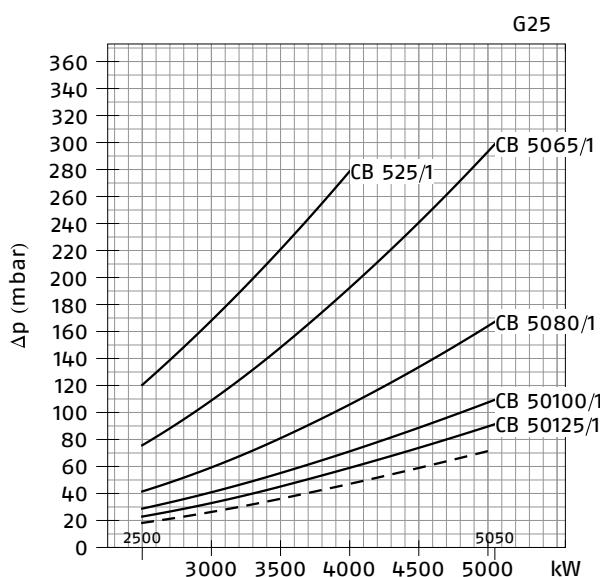

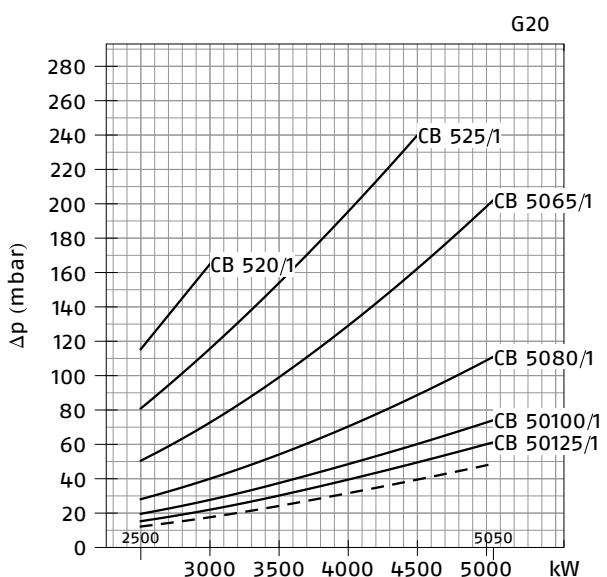

The minimum input gas pressure required is 15 mbar while burner operating.

In particular, the pressure difference between gas train upstream and downstream has to remain always over pressure drop values indicated below.

C.T. Gas valve leak detection control device:

- gas train not equipped with leak detection control device; this device can be ordered separately - see VPS column - and installed later.

◆ gas train equipped with leak detection control device.

VPS Valve leak detection control device. Supplied separately from the gas train, on demand.

● Gas train not available or not suitable for the matching to the burner.

Hydraulic circuits

The hydraulic circuit of the RLS/M series of burners is characterised by a fuel pump with an independent motor.

The burners are fitted with two valves (a safety valve and an operation valve) and an oil filter along the oil line from the pump to the nozzle.

A pressure regulator on the return circuit from the nozzle enables the quantity of fuel burnt to be varied. Two safety valves on the return circuit avoid oil leakage from the nozzle when the burner is in stand-by and prepurge phase.

The models are fitted with a maximum pressure switch on the oil return circuit, and a minimum oil pressure switch on the oil line from the pump to the nozzle.

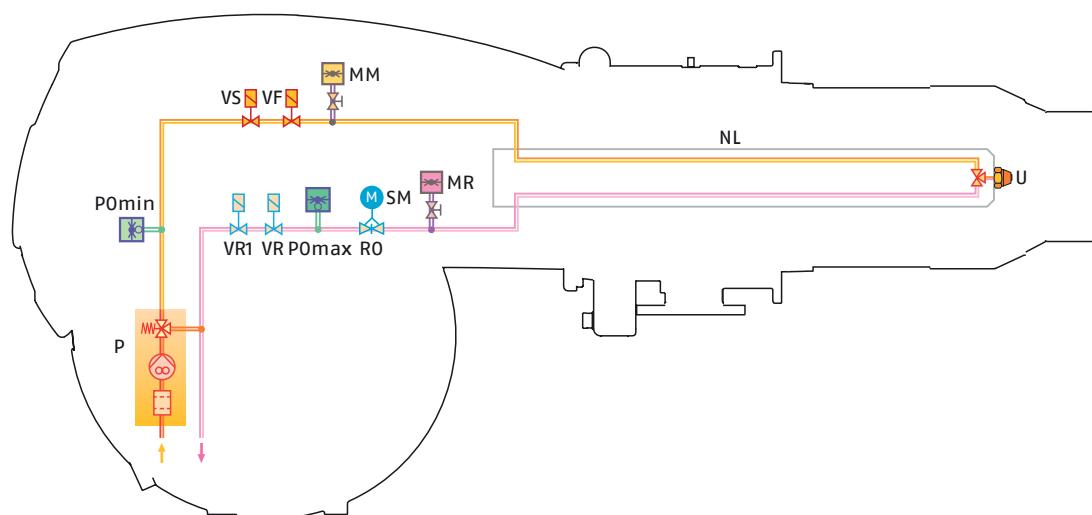

The burner is suitable for continuous operation.

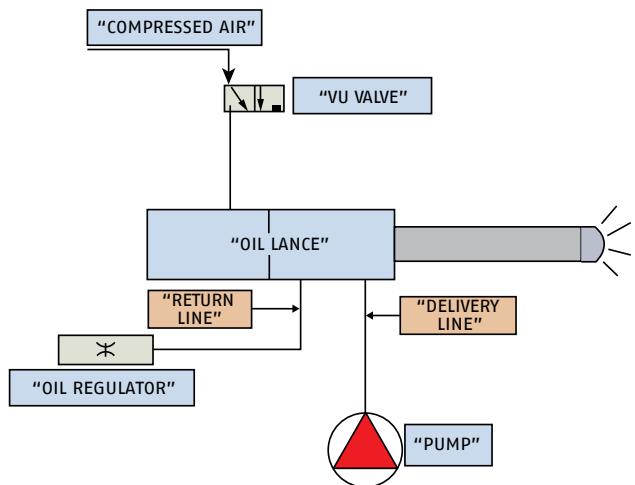

Example of the RLS 500-800/M burner hydraulic circuit

P	Pump with filter and pressure regulator
P0 min	Min. oil pressure switch on the delivery circuit
VF	Operating valve
VS	Safety valve on the delivery circuit
MM	Pressure gauge on the delivery circuit
NL	Nozzle pipe
U	Nozzle
MR	Pressure gauge on the return circuit
SM	Servomotor
R0	Pressure regulator on the return circuit
P0 max	Max. oil pressure switch on the return circuit
VR	Safety valve on the return circuit
VR1	Safety valve on the return circuit

EN 267 > 100 Kg/h - RLS 500 - 650 - 800/M

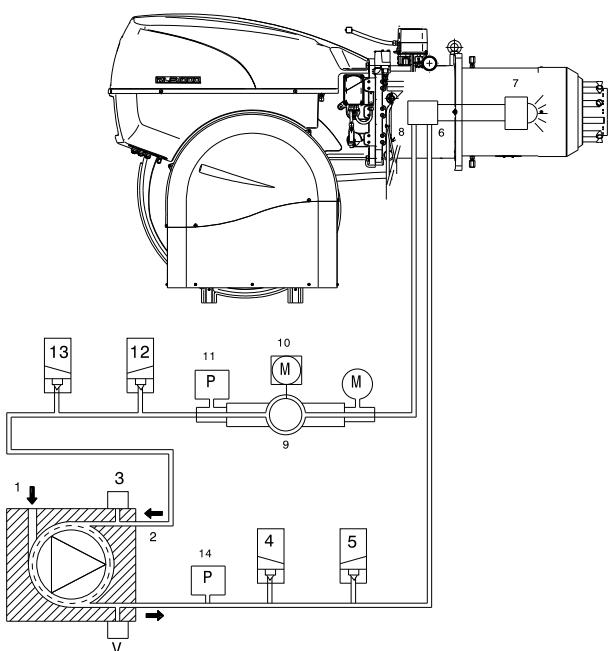

The RLS 1000-1200/M burners are equipped with a spray lance for light oil activated by compressed air.

Example of light oil pump

11	Pressure switch on nozzle return line
12	Safety valve on nozzle return line
13	Safety valve on nozzle return line
14	Pressure switch on pump delivery line
M	Pressure gauges
V	Vacuometer connection

Selecting the fuel supply lines

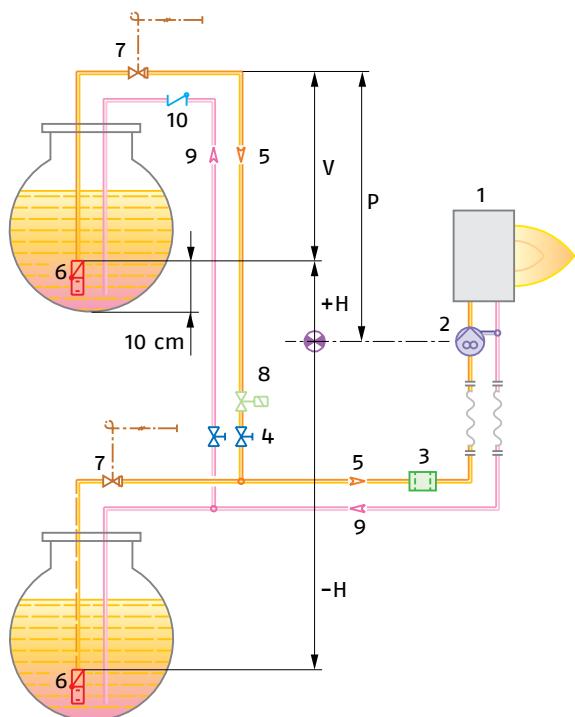

The fuel feed must be completed with the safety devices required by the local norms.

The table shows the choice of piping diameter, depending on the difference in height between the burner and the tank and their distance.

With ring distribution oil systems, the feasible drawings and dimensioning are the responsibility of specialised engineering studios, who must check compatibility with the requirements and features of each single installation.

Ventilation

The ventilation unit comes with a sound proofing system.

All the burners in the RLS 500-650-800-1000-1200/M series are fitted with fans, which give excellent performance and are fitted in line with the combustion head.

The air flow and sound-deadening materials used in the construction are designed to reduce sound emissions to the minimum and guarantee high levels of performance in terms of output and air pressure.

A high precision servomotor through the main management module installed on each burner of RLS 500-650-800-1000-1200/M series, controls the air dampers position constantly.

Example of the RLS 1000-1200/M sound proofing system.

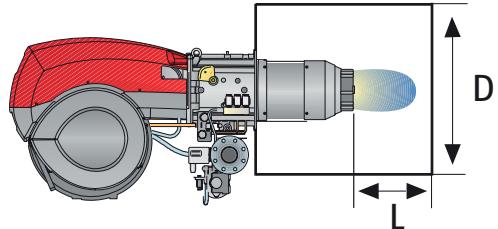

Combustion Head

The innovative combustion head adjustment system ensures perfect movement during modulation as well as reducing noise and pollutants. Simple adjustment of the combustion head allows to adapt internal geometry of the head to the output of the burner. The same adjustment servomotor for the air damper also varies, depending on the required output, the setting of the combustion head, through a simple lever. This system guarantees excellent mix on all firing rates range.

Example of a RLS 500/M MX burner combustion head

DIMENSIONS OF THE COMBUSTION CHAMBER

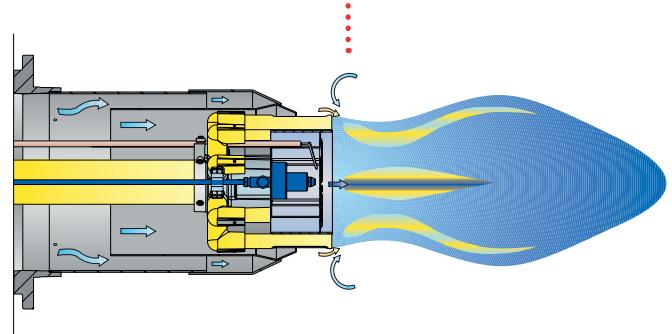

Example:
Burner thermal output = 3500 kW;
L combustion chamber (m) = 3,5 m (medium value);
D combustion chamber (m) = 1,5 m (medium value).

Safe and Green

The RLS/M series combustion head reduce polluting emissions thanks to their special design which optimises the air fuel mix.

In the RLS/M series part of the gas is distributed through outlets which the remaining gas is injected directly into the centre of the flame.

This prevents no homogeneous concentrations in the flame with areas of high oxidation, producing very stable flame with gradual and progressive combustion as the flame develops, thus giving polluting emission values below even the most restrictive norm values.

Combustion head operating diagram of RLS/M series

Operation

BURNER OPERATION MODE

The RLS 500-650-800-1000-1200/M series of burners can have "two-stage progressive" or "modulating" operation.

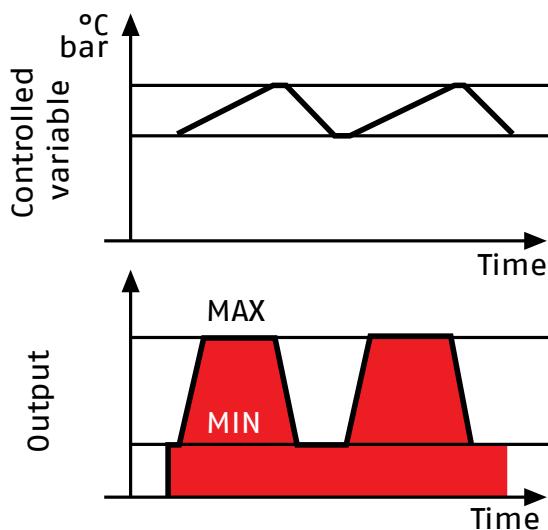

Analog 4-20 mA or 0 - 10V converter for remote modulation

On "two-stage progressive" operation, the burner gradually adapts the output to the requested level, by varying between two pre-set levels (see picture A).

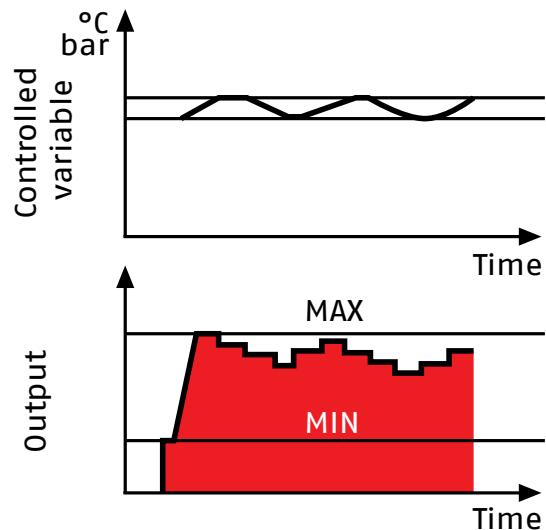

On "modulating" operation, normally required in steam generators, in superheater boilers or diathermic oil burners, a specific regulator and probes are required. These are supplied as accessories that must be ordered separately. The burner can work for long periods at intermediate output levels (see picture B).

"TWO-STAGE PROGRESSIVE" OPERATION

Picture A

"MODULATING" OPERATION

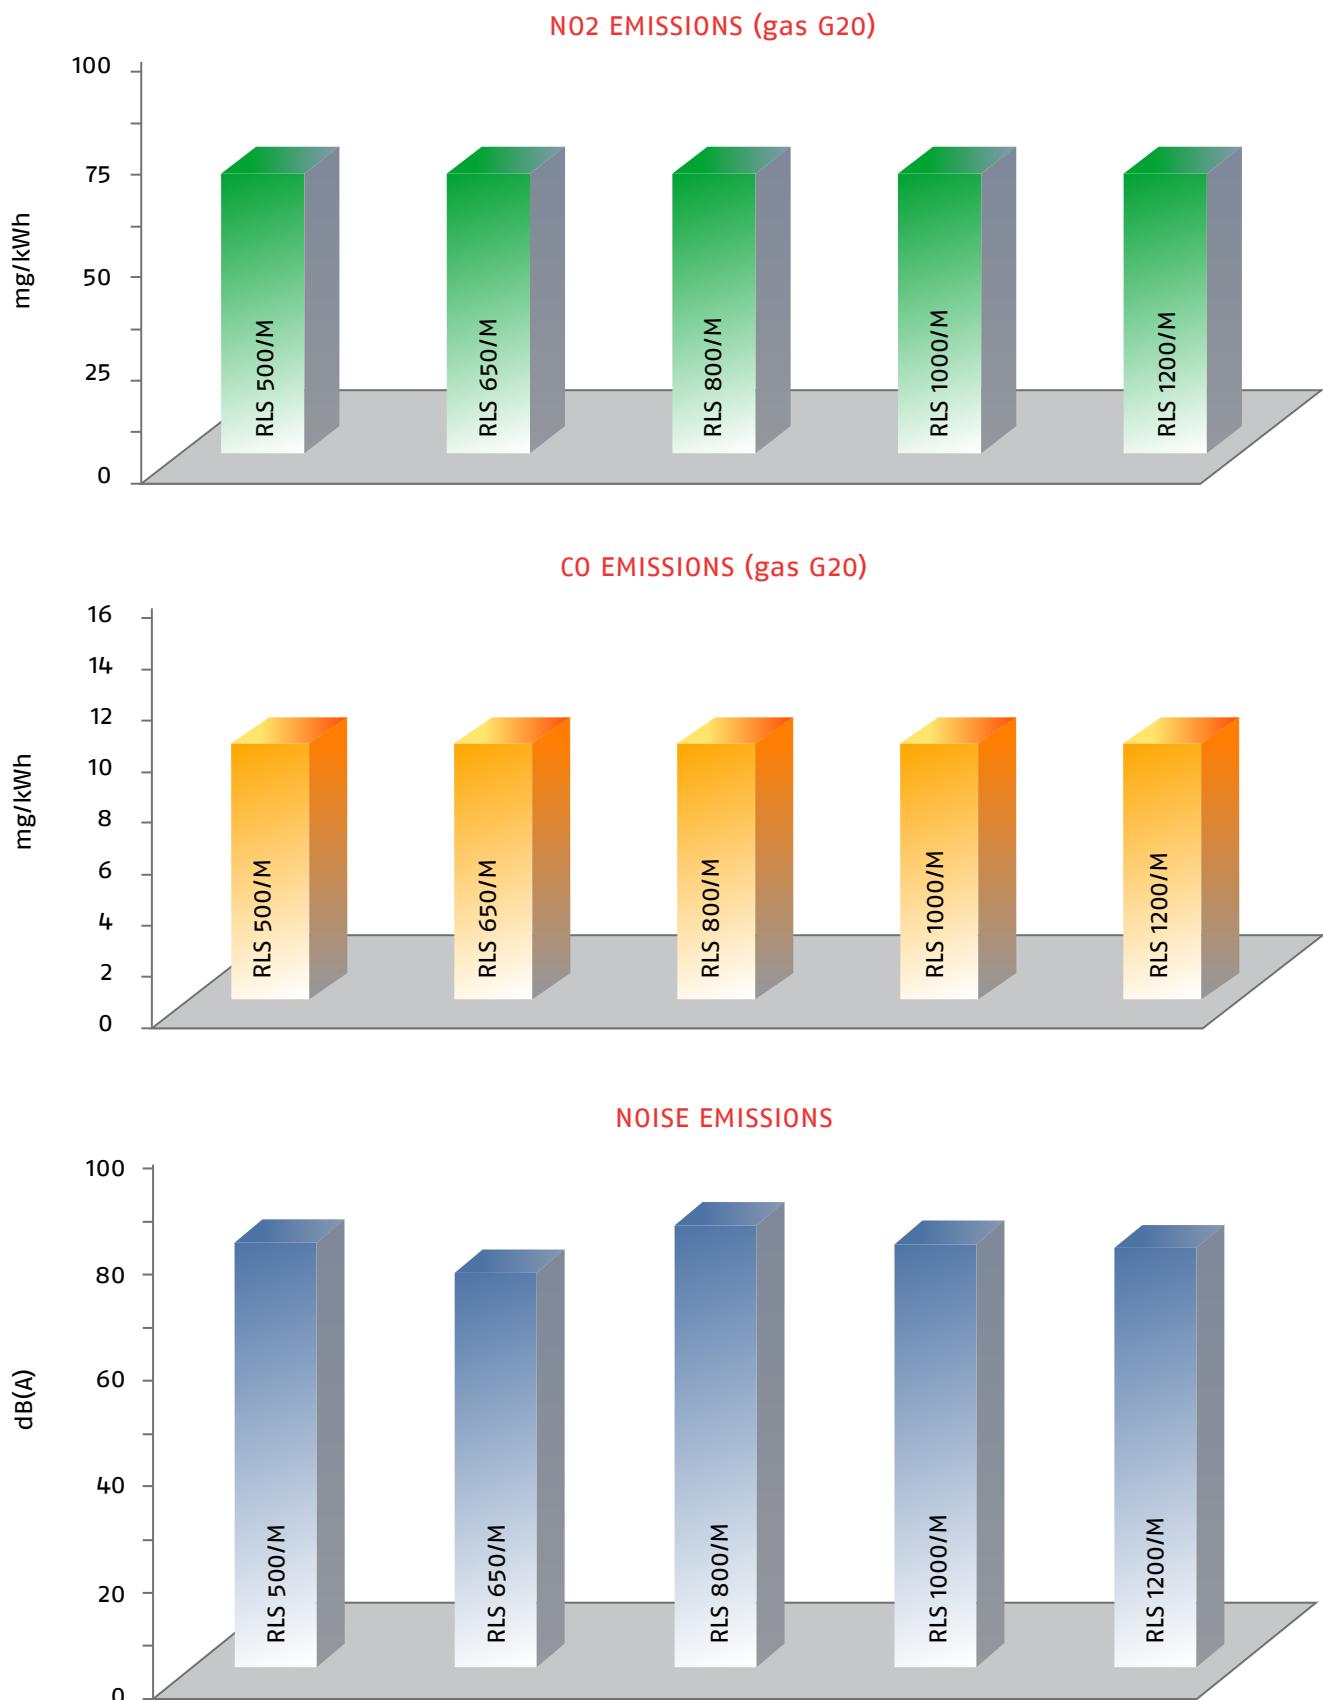

Picture B

The RLS 500-650-800-1000-1200/M series burners are fitted with the LFL1...control panel. The FS2 burners are on demand and fitted with the LGK control panel.

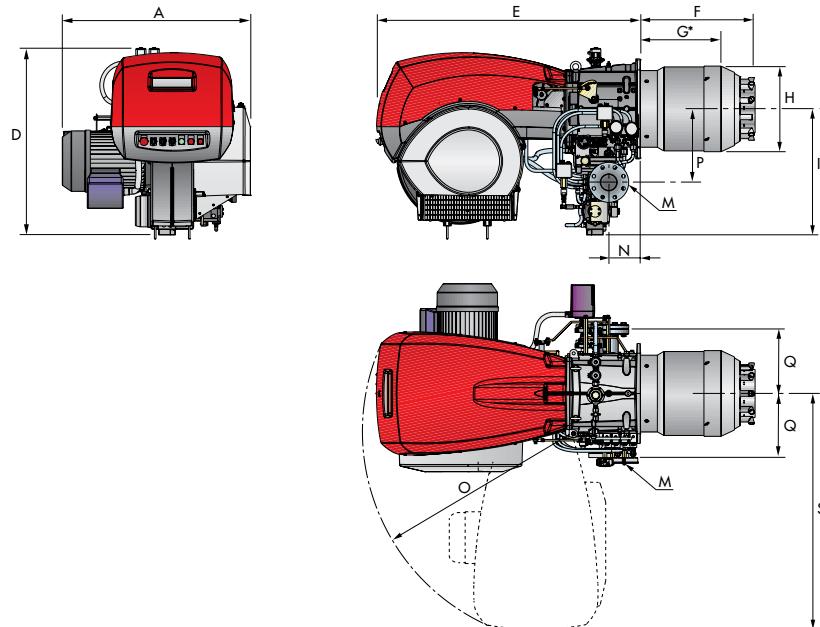

Emission

The noise emissions have been measured at the maximum output.

ACCESSORIES FOR MODULATING OPERATION

POWER CONTROLLER

To obtain modulating operation, the RLS/M MX series of burners requires a regulator.

BURNER	REGULATOR TYPE	REGULATOR CODE
All models	RWF 50.2	20101190
All models	RWF 55.5	20101191

PROBE

The relative temperature or pressure probes fitted to the regulator, must be chosen on the basis of the application.

BURNER	PROBE TYPE	RANGE (°C) (bar)	PROBE CODE
All models	Temperature PT 100	-100 ÷ 500°C	3010110
All models	Pressure 4 ÷ 20 mA	0 ÷ 2,5 bar	3010213
All models	Pressure 4 ÷ 20 mA	0 ÷ 16 bar	3010214
All models	Pressure 4 ÷ 20 mA	0 ÷ 25 bar	3090873

ANALOG CONTROL SIGNAL CONVERTER

BURNER	TYPE (INPUT SIGNAL)	CODE
All models	0/2 - 10 V (impedance 200 KΩ) 0/4 - 20 mA (impedance 250 Ω)	3010390

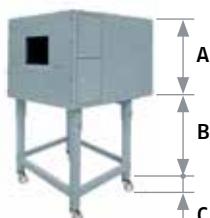

POTENTIOMETER

BURNER	KIT CODE
RLS 500-650-800/M	3010402
RLS 1000-1200/M	on demand

It is necessary for analogic control signal converter operation.

FUEL REMOTE SELECTION KIT

BURNER	KIT CODE
RLS 500-650-800-1000-1200/M	3010372

SOUND PROOFING BOX

If noise emission needs reducing even further, sound-proofing boxes are available.

In case of generator heights, where a lower dimension "B" is required, ask for the Box Support Kit code 20065135.

BURNER	BOX TYPE	A (mm)	B (mm) min-max	C (mm)	[dB(A)] (*)	BOX CODE
RLS 500-650-800/M	C7	1255	160 - 980	110	10	3010376
RLS 1000-1200/M	C8	1425	285 - 1000	110	10	3010401

(*) Average noise reduction according to EN 15036-1 standard

SPACER KIT

If burner head penetration into the combustion chamber needs reducing, varying thickness spacers are available, as given in the following table:

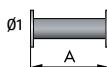

BURNER	SPACER THICKNESS S (mm)	KIT CODE
RLS 500-650-800/M	180	20008903

Gas train accessories

ADAPTERS

In certain cases, an adapter must be fitted between the gas train and the burner, when the diameter of the gas train is different from the set diameter of the burner.

Below are given the available adapters; please see on the Gas Train list the correct adapter codes to select.

ADAPTER	DIMENSIONS					ADAPTER CODE

PRODUCT SPECIFICATION

Burner

Monoblock forced draught dual fuel burner with modulating operation, fully automatic, made up of:

- High performance fan
- Air suction circuit lined with sound-proofing material
- Air damper for air setting controlled by a high precision servomotor
- Air pressure switch
- Fan starting motor at 2800 rpm, three-phase, 400V, 50Hz
- Low emission combustion head, that can be set on the basis of required output, fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - ignition electrodes for RLS 500
 - ignition by gas pilot with gas train for RLS 650 - 800 - 1000 - 1200 models
 - flame stability disk
- Mechanical cam with gas and oil modulator
- Maximum gas pressure switch, with pressure test point, to stop the burner in the case of over pressure on the fuel supply line
- Flame control panel for controlling the system safety - Infrared flame detector
- Star/triangle starter for the fan motor - Main electrical supply terminal board
- Burner on/off switch
- Auxiliary voltage led signal
- Burner working led signal
- Contacts motor and thermal relay with release button
- Motor internal thermal protection
- Motor failure led signal
- Burner failure led signal and lighted release button
- Emergency button
- Connection plugs-sockets
- Burner opening hinge
- Lifting rings
- IP 54 electric protection level
- Light oil gears pump for high pressure fuel supply
- Dedicated pump starting motor
- Valve system with double oil safety valve on the output circuit and double safety valve on the return circuit
- Maximum and minimum oil pressure switches
- Oil pressure gauges on supply and return oil lines
- Oil/Gas selector
- Flame inspection window
- The RLS 1000-1200/M dual fuel burners are equipped with a spray lance for light oil, activated by compressed air (air compressor not included).

Standard equipment:

- 1 flange gasket
- 4 screws for fixing the flange
- 1 thermal screen
- 4 screws for fixing the burner flange to the boiler
- 2 flexible pipes for connection to the oil supply network
- 2 nipples for connection to the pump with gaskets
- Seal control pressure switch (for installation on gas train)
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue.

Gas train

Fuel supply line, in the MULTIBLOC configuration (for a diameter of 1-1/2" and 2") or COMPOSED configuration (from a diameter of DN 65 until a diameter of DN 125), fitted with:

- Filter
- Stabiliser
- Minimum gas pressure switch
- Safety valve
- One stage working valve with ignition gas output regulator.

Conforming to:

- 2004/108 EC directive (electromagnetic compatibility)
- 2006/95 EC directive (low voltage)
- 2006/42 EC directive (machine)
- 2009/142 EC directive (gas)
- EN 676 (gas burners)
- EN 267 (light oil burners).

Available accessories to be ordered separately:

- RWF 50 power controller
- Temperature probe -100/+500 °C
- Pressure probe 0-2.5 bar
- Pressure probe 0-16 bar
- Pressure probe 0-25 bar
- Analog control signal converter
- Potentiometer kit for servomotor
- Continuous ventilation kit
- UV cell kit
- PC interface kit
- Sound proofing box
- Spacer
- Adapters
- Stabiliser spring
- Seal control.

NOTES

NOTES

Riello Burners a world of experience in every burner we sell.

[2] HEADQUARTER BURNERS DIVISION
S. PIETRO, LEGNAGO (VERONA) - ITALIA

Across the world, Riello sets the standard in reliable and high efficiency burner technology.

With burner capacity from 5 kW to 48 MW, Riello gas, oil, dual fuel and Low Nox burners deliver unbeatable performance across the full range of residential and commercial heating applications, as well as in industrial processes.

With headquarter in Legnago, Italy, Riello has been manufacturing premium quality burners for over 90 year. The manufacturing plant is equipped with the most innovative systems of assembling lines and modern manufacturing cells for a quick and flexible response to the market.

Besides, the Riello Combustion Research Centre, located in Angiari, Italy, represents one of the most modern facility in Europe and one of the most advanced in the world for the development of the combustion technology.

Today, the company's presence on worldwide markets is distinguished by a well-constructed and efficient sales network, alongside many important Training Centres located in various countries to meet its customers' needs. Riello has 13 operational branches abroad (in Europe, America and Asia), with customers in over 60 countries.
