Beretta Launches POWER MAX*The new professional power modular wall system*

Lecco, Italy, XXX xxxxxxx 2018 – Beretta launches its newest line of condensation products with the all-new Power Max professional modular wall system. Versatile and compact, Power Max replaces Beretta's prior system, the Power Plus. Beretta, through its parent company Riello Group, is a part of Carrier, a leading global provider of innovative HVAC, refrigeration, fire, security and building automation technologies.

The Power Max is ideal for large residential and commercial installations, whether it be for new buildings or energy redevelopment and substitutions. One of the main technological advantages of the system is the new stainless steel heat exchanger, designed in symbiosis with the premixed gas burner. With a high modulation range that reduces the polluting emissions of CO and NOx (Class 6 according to EN 15502) under the most restrictive European limits, it allows greater recovery of the heat contained in the fumes to transmit it to the water. Consisting of eight models from 34.9 kW up to 131 kW, it is suitable for both single and cascade installation, where Power Max achieves maximum yields up to a power of 1.12 MW with integrated logics in the managing/reporting boiler. By controlling the running thermal modules, Power Max can optimize the power delivered and guarantees continuity of service in the event of one of the motors being blocked. The internal electronic board makes it possible to manage complex systems, while the addition of the flue and hydraulic accessory kit makes it possible to control up to 10 modules in cascade, thus benefiting from a very high modulation ratio.

The range is also designed for easy maintenance with direct front access; in the cascade system the maintenance of the single module can also take place leaving the other components in operation. The wide selection of accessories and the possibility of multiple product configurations makes it possible to adapt Power Max to varying needs. The interface between primary and secondary circuit can be realized either with a hydraulic separator or with plate exchanger.

Power Max is compatible with the Beretta BeSMART intelligent remote control to manage the comfort of the home via an app in a simple and intuitive way as well as meet the regulatory requirements required by the 2018 Financial Law to access the 65% tax deduction where permitted.
