† Using the 8-inch (200mm) vent connection on the AR3000-AR4000 limits the allowable vent length, see venting section.

Piping & Available Head Pressure

Important! The Array boiler includes internal boiler loop pumps. The boiler(s) **must** be piped primary-secondary, "hydraulically separated" from the system and other pumps. Boiler(s) must connect the distribution via closely spaced Tees or hydraulic separator. See IO&M Boiler Room Layout example.

Boiler loop piping must be sized to accommodate the required boiler maximum flow with pressure drop at or below the available head pressure. Below: Available head pressure for the boiler loop.

Venting II – Specified as Total Allowable Pressure Drop

This section can be used for designing a multiple boiler common vent or for custom engineering single boiler venting.

Installation must comply with local requirements and with the National Fuel Gas Code ANSI Z223.1. **Array** boilers vent and air piping can be installed through the roof or through a sidewall. Suitable, UL approved, positive pressure, watertight vent materials **MUST** be used for safety and UL certification. (CPVC, PP, Stainless Steel, AL29-4C)
