**New Beretta Exclusive Boilers Offer Innovative Design And Energy
Efficiency**

TORUŃ, Poland, July XX, 2019 – Beretta's new Exclusive line of wall-mounted boilers offer many advantages, including an innovative active combustion control (ACC) system, a user-friendly control panel and remote control capability. These features make the Exclusive boiler a modern and suitable choice for people who don't want to compromise on design and energy efficiency. Beretta, a part of Riello Group, a leader in products and services for heating, air conditioning and energy efficiency, is a part of Carrier, a leading global provider of innovative HVAC, refrigeration, fire, security and building automation technologies.

The Exclusive boiler is equipped with a modern and user-friendly control panel, covered with an elegant flap, under which you can see the LED strip indicating the current state of work. The interface has a 3.5 inch backlit LCD display, which communicates with the user through text and icons. Four buttons allow the panel to be viewed in a simple and intuitive way, allowing access to all boiler and installation settings and parameters. Advanced self-diagnosis, in conjunction with Exclusive control panel functions, complete the picture of innovation.

The boiler's ACC system, designed and developed by Beretta, provides functionality, performance and low emissions under all conditions. The system maintains the optimal value of the air and gas mixture for the duration of the power modulation – ensuring that carbon dioxide readings meet stringent emission

standards. The sophisticated Exclusive control system ensures self-regulation of combustion, so there is no need for initial calibration, and the boiler can work with different types of gas.

Thanks to the improved technology, heat exchangers in Beretta boilers have a very high seasonal energy efficiency of 94% (efficiency calculated in accordance with the new European Union directive ErP) and have an energy efficiency class A rating. The boiler offers energy efficiency and reduction of emissions without affecting the level of comfort.

By connecting a BeSMART Wi-Fi controller to the boiler in the digital communication mode, it is possible to remotely control the boiler, as well as the whole system, by a mobile application on a smartphone or tablet. This combination of the boiler with the programmer guarantees the energy efficiency class at the A + level. In order to obtain detailed information about the new BeSMART programmer, please visit our dedicated website www.besmart-home.pl.

Due to the high quality of Beretta equipment, RUG Riello Urządzenia Grzewcze S.A. offers a 5-year warranty, the conditions of which can be found at www.beretta.pl. By registering the boiler [online](#), users will be automatically informed about planned inspections, and in the case of a lost warranty card, all data on boiler servicing will be in the manufacturer's database.
