Beretta Presents CIAO X, Redesigned Wall-hung Condensing Boiler, Combining Innovative Technology and Environmental-responsibility, Offering Greater Comfort

Legnago, ITALY – Beretta's **CIAO X** range of boilers retains the distinguishing features of Beretta legacy models in terms of high comfort and user-friendliness, while adding many important and innovative new features including a new primary heat-exchanger in stainless steel, a new touchpad interface and hydraulic DIN connections. Beretta, through its parent company [Riello](#), is a leader in manufacturing systems and technologies for heating, cooling and energy efficiency in the residential and commercial sectors and a worldwide leader in combustion technology.

The new high-efficiency condensing heat exchanger in stainless steel, provides many benefits and advantages. The coiled smooth tube ensures optimized efficiency of the combustion and cleanliness over time. The stainless-steel provides high resistance to corrosion, deriving from acid condensate. The large section of the tube and its geometry as a unique coil ensure a constant flow. The frontal access to heat exchanger enables ease of maintenance and cleaning of the combustion chamber.

In the combi models, the high-performance plate heat exchanger warm up the domestic hot water instantaneously, without the need of any external tank and has been optimized to obtain high performance and great comfort in terms of temperature stability and reduced waiting times. These benefits are also beneficial for the environment, saving water and energy.

CIAO X's modern and linear design blends easily into any setting. The compact dimensions and low weight allow the boiler to be easily installed inside the house,

recessed in box or outdoors, in a partially protected space. **CIAO X** is ideal for the replacement of old boilers, both with DIN and with Beretta connection sequence, thanks to the availability of accessory kits that simplify the conversion, as well as for new housing. The wide range of accessories - e.g., flue kit, compact water filters and hydraulic connections cover - also makes installation easier and harmonizes integration inside the house. The five models of the range, from 15 to 30 kW, satisfy residential needs.

The new digital touchpad interface, combining innovative design and features with intuitiveness, is another distinguishing characteristic of the new range. To allow an immediate understanding of the displayed functions, the LCD display communicates with the end-user and installer through icons, without using texts. With **CIAO X** it is now possible to control the comfort by a simple touch and to easily access all the settings and parameters of the boiler and the system.

And what's more, **CIAO X** is born now, thinking of tomorrow. The new condensing range, in fact, is designed to operate with blends of natural gas and hydrogen - up to 20% - first step toward the environmental sustainability objectives and the decarbonisation process started by the European Union. About Beretta

Beretta is a leader in residential heating and hybrid systems aimed at multi-energy and multi-efficiency solutions, providing excellence and innovation for comfort within homes throughout the world. Its parent company, Riello, is a leader in manufacturing systems and technologies for heating, cooling and energy efficiency in the residential and commercial sectors and a world-wide leader in combustion technology. Headquartered in Legnago (Verona), Italy, Riello operates in over 120 countries. Riello is a part of Carrier Global Corporation, the leading global provider of healthy, safe, sustainable and intelligent building and cold chain solutions.
