**RIELLO presents INSIEME EVO COND: THE NEW STAINLESS STEEL
CONDENSING GASOIL BOILER**

Legnago (VR), xx October 2020 – Riello expands its product portfolio with the introduction of INSIEME EVO COND, the new range of gasoil condensing thermal units, with horizontal heating exchange made entirely of stainless steel, thanks to which it is possible to operate without limits on the return temperature with all types of gasoil (S <1000 ppm).

[Riello](#) is a leading brand in heating, air conditioning and energy efficiency products and services, and is part of Carrier (NYSE: CARR), a leading global provider of innovative heating, ventilating and air conditioning (HVAC), refrigeration, fire, security and building automation technologies.

The new range of RIELLO INSIEME EVO COND condensing boilers is available in 3 different versions, making it the ideal solution for all types of systems:

- "V LN" heating only versions with firebox power equal to 20, 25 and 35 kW, equipped with single-stage burner with low polluting emissions, low consumption modulating circulator ($EEL \leq 0.20$), 3-way valve and 12 liters expansion
- "LN" heating only versions with firebox power equal to 45, 55, 70 kW, equipped with single-stage burner (for version 45) and two-stage (for models 55, 70 kW) with low polluting emissions

- Combined versions "B LN" with firebox power equal to 25, 35 kW, equipped with a single-stage burner with low polluting emissions, low consumption modulating circulator ($EEL \leq 0.20$), 130 liters vitrified domestic hot water tank, 12-liter expansion on the heating circuit and 6-liter expansion on the sanitary circuit.

The combustion efficiency, which places the RIELLO INSIEME EVO COND range in class A, the ease of use and maintenance, as well as the high level of comfort, both in heating and in sanitary, complete the profile of this reliable and functional product, in perfect harmony with the Riello tradition.

The new layout also allows easy periodic maintenance and cleaning of the combustion chamber.

RIELLO INSIEME EVO COND is equipped with a new state-of-the-art and user-friendly control panel, which communicates with the user through a modern 5-key backlit LCD display, which allows, in addition to boiler parameterization, to manage up to 3 zones, sanitary circuit management and climatic operation in a simple and intuitive way.

The presence of the LEDs, positioned below the display, guarantees immediate feedback on the operating status of the boiler.

The electronics also offers the possibility of remote management via 0-10 V input or with Modbus protocol.

RIELLO INSIEME EVO COND is available as standard with an open chamber, aspirating the air necessary for combustion directly from the openings positioned on the back of the generator, but it can be converted into a sealed chamber with the aid of specific accessories, offering the possibility of the split exhaust, both of the concentric exhaust.

Finally, RIELLO INSIEME EVO COND is compatible with all the functions of RiCLOUD, Riello's intelligent remote control that allows, through an easy-to-use APP, to control and manage home comfort wherever you are, even away from home, via Smartphone and tablet.
