

Riello's Renewed Portfolio of Residential Wall-Mounted Air Conditioners Combines Technology and Design for Maximum Comfort

LEGNAGO (Verona), May 13, 2024 - [Riello](#) is presenting its renewed offer for residential wall-mounted air conditioners, consisting of three product ranges to meet the diverse needs of consumers in all seasons. The main focus is the combination of cutting-edge technology, modern design, and advanced connectivity, resulting in a home cooling and heating experience that delivers wellbeing and health. Riello is part of Carrier Global Corporation (NYSE: CARR), global leader in intelligent climate and energy solutions.

RIELLO ELIXA™: Japanese Technology for Top-Class Comfort

At the top of the new offer is RIELLO ELIXA, a family of high-end monosplit air conditioners characterized by the most advanced Carrier-developed Japanese inverter technology. Offering energy class A+++ in both cooling and heating, RIELLO ELIXA air conditioners not only provide uncompromising efficiency and reliability, but also optimal comfort and healthier air at home, whatever the season.

Using innovative inverter modulated power technology, the RIELLO ELIXA air conditioner adjusts cooling and heating capacity by matching compressor speed to user demand. In so doing, users experience minimized temperature variations and less overall acoustic impact. In addition, special QUIET and SILENCE functions further lower the noise level to just 19 dB(A) in the indoor unit (QUIET function activated) and 38 dB(A) in the outdoor unit (SILENT function activated).

All RIELLO ELIXA indoor units come as standard with an integrated and completely hidden Wi-Fi module. To adjust climate control at any time, even from outside the home, occupants can use the intuitive proprietary 'Hi, Comfort AC' App, which provides full access to all comfort programming functions and allows energy consumption monitoring.

The RIELLO ELIXA range consists of three sizes: 2.5, 3.5 and 5 kW.

AARIA MONO PLUS I: Unique Design for Constantly Connected Comfort

The AARIA MONO PLUS I range represents Riello's new mid-range offer, featuring a Wi-Fi module as standard to enable intuitive and convenient control of the air conditioner via the BeSmart AC/Evo 2 App. With an attractive design and several advanced features, AARIA MONO PLUS I delivers an air conditioning experience tailored to any home environment. It also operates in multi-split mode in combination with outdoor units from Riello's AARIA MULTI PLUS I range.

The unique ECO SENSOR function adjusts airflow based on the human presence it can detect in the room and offers significant energy savings by monitoring room conditions in real time. The HEALTH function improves indoor wellbeing by activating the integral UV lamp to remove harmful micro-organisms from the air.

Quiet operation is another distinguishing feature of the AARIA MONO PLUS I, with the indoor unit emitting just 16 dB(A), the lowest value in the entire Riello air conditioning portfolio.

With its linear design and matte white finish, the indoor unit has a "raised" wave pattern on the side, making it very elegant and suitable for both classic-style environments and more modern, minimalist settings.

The AARIA MONO PLUS I range is available in three sizes of 2.5, 3.5 and 5 kW.

AARIA START N: Efficiency in Home Air Conditioning

AARIA START N is Riello's entry-level offer, combining reliable performance with essential features. With the ability to cool or heat up to two rooms simultaneously, AARIA START N proves an affordable option for those seeking basic home comfort without sacrificing quality.

Both the indoor units, with their renewed aesthetics, and the outdoor units feature particularly compact dimensions, making them easy to install in any type of environment. A distinctive element is the air conditioner's quiet output. Through activation of the QUIET function from the remote control, it is possible to run the fan at super-minimum speed and emit just 18 dB(A), both in cooling and heating mode.

Among the main features is I FEEL, also found in the mid-range offer, which allows the adjustment of room temperature according to that perceived by the remote control for better comfort near the user. No less important is the 56°C sterilization function, which

helps to keep the home environment clean and healthy by eliminating viruses and bacteria through heating the evaporator to a high temperature to provide healthier air from the air conditioner.

The AARIA START N range has four sizes of 2.5, 3.5, 5 and 7 kW.

A complete range for all needs

With its new and innovative range of wall-mounted air conditioners, Riello confirms its position as a leading supplier in the home comfort sector, offering advanced solutions tailored to different user needs.

In summary, Marta Bernasconi, Product Manager Air Conditioning Products at Carrier Global Comfort Solutions Europe, says: "Riello agents and installers will be able to propose a complete range of modern air conditioning solutions characterized by innovative technology, energy efficiency, environmental comfort, great quality, and high reliability."
