**Vokèra by Riello Unveils New Feature-Rich Vibe MAX
Entry-Level Residential Boiler Range**

*Compact combi and system models combine affordability with high efficiency,
ease of installation and future-proof functionality*

LONDON COLNEY, England, July 4th, 2022 – Vokèra by Riello has unveiled the Vibe MAX, a brand-new boiler platform that combines value-for-money with high-end functionality. Available in a choice of combi and system models, the compact Vibe MAX is designed to be 20% hydrogen-blend ready and is packed with all-new features, including built-in Modbus connector, revised ‘universal pipework’ layout, and a primary heat exchanger in corrosion-resistant stainless steel. Vokèra, through its parent company [Riello](#), is part of Carrier Global Corporation (NYSE:CARR), the leading global provider of healthy, safe, sustainable and intelligent building and cold chain solutions.

The Vibe MAX takes the entry-level residential boiler to new heights of efficiency, functionality and reliability. The stainless-steel heat exchanger ensures optimum strength and durability, potentially increasing the life of the appliance and resulting in less downtime due to maintenance. This latest addition to Vokèra’s range also utilises advanced electronics, including a modern human-machine interface (HMI) and digital touchpad interface to assist operation, installation and servicing.

Vibe MAX also incorporates a Bluetooth clock module that allows the end user to easily program the 'heating' ON/OFF schedule via their smart phone using our app.

The 26kW and 30kW Vibe MAX models both offer impressive 93% seasonal space heating efficiency and improved domestic hot water (DHW) performance. The compact Vibe MAX measures just 700 x 400 x 275mm, ensuring ease of handling and siting in all types of residential property, even where space is at a premium.

Hydrogen-ready boilers are considered key to facilitating the conversion of existing gas distribution networks from natural gas to low-carbon hydrogen. As a 20% hydrogen-blend ready boiler, Vibe MAX is the ideal choice for homeowners looking for an efficient heating solution that can burn a methane/hydrogen blend as and when their local network makes the switch.

Finally, as part of its advanced design Vibe MAX has the potential to become part of the IoT in today's smart homes using Wi-Fi connectivity. This option will enable homeowners to program and control their heating for optimum comfort and efficiency and monitor their energy consumption via cloud-based services.
